

TSS

The **TSS** is the latest addition to the TST product range.

What makes the **TSS** different from existing products on the market are the built-in features that you normally do not find in this otherwise relatively simple product.

TSS handles an exceptionally large cable span.

With the "**pushout**" membrane you always have a round opening and are guaranteed to have IP67.

The **TSS** is equipped with a sock that closes tight around the cable and allows for it to be moved around like a "**joy-stick**" in the opening without endangering the IP-classification. So it works extremely well with cables passing through at an angle.

These are some of the features that creates a lot of value added in the **TSS**, and makes it a unique product.
